HC

Application/Control Number: 10/761,065

Art Unit: 1649

Claims 1 to 18 are pending in the instant application.

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- Claims 1 to 4, drawn to a receptor polypeptide, classified in class 530, subclass 350.
- II. Claims 5 to 12 and 14, in so far as they are drawn to an isolated polynucleotide, vector, host cell and method of use, classified in class 435, subclass 69.1.
- III. Claims 13 and 14, in so far as they are drawn to an antibody, classified in class 530, subclass 388.22.
- IV. Claim 15, drawn to a receptor binding assay, classified in class 435, subclass 7.21.
- V. Claims 16 and 17, drawn to a modulator of unspecified constitution, classification undeterminable.
- VI. Claim 18, drawn to a transgenic animal, classified in class 800, subclass 2.

The inventions are distinct, each from the other because of the following reasons:

The polypeptide of invention I, the nucleic acid of invention II, the antibody of invention III, the modulator of invention V and the animal of invention VI are five different compounds or compositions, each of which can made and used without the others. These five inventions do not reflect a single inventive concept because they lack a common feature or combination of features that distinguish them as a group from the prior art.

Application/Control Number: 10/761,065

Art Unit: 1649

Inventions I and II are each related to invention IV as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case the claimed assay can be practiced with an (isolated) polypeptide of invention I, a host cell of invention II, or with a cell that naturally expresses the recited receptor polypeptide, each of which are materially and patentably different products.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

Any inquiry concerning this communication or earlier communications from the examiner should be directed to John D. Ulm whose telephone number is (571) 272-0880. The examiner can normally be reached on 9:00AM to 5:30PM.

Application/Control Number: 10/761,065

Art Unit: 1649
